Click here to view a copy of this communication. This will be effective from December 2020. Details on these can be found under PROMPT Training below. The PROMPT Maternity Foundation PMF UK will license a new program provider to deliver T3 Courses from December 2020. For further details about the new provider visit the PROMPT UK website or email PMF here. Decisions on courses scheduled to run after this time will be made in due course and in accordance with Government guidelines. In the event that restrictions around the pandemic are not relaxed before the end of the PROMPT license term, all planned courses will be cancelled. Information on PROMPT Courses can be found under PROMPT Training below. Queries related to the delivery of PROMPT T3 courses post2020 should be directed to PMF UK via email here. If your hospital will be registering staff at a T3 course before the end of November 2020, this option will be available to you. For courses held from December 2020 we are unable to comment on attendance criteria. This will be the decision of the new provider Further information about manual purchase can be found in the section Course Manual Purchase below. Please direct all manuals purchase queries to CUP here. The PROMPT Train the Trainer T3 program is delivered in Australia and New Zealand by RANZCOG under license from the PROMPT Maternity Foundation PMF UK. RANZCOG has delivered the program in Australia since 2012, with the program now running at various hospitals across all states and territories. RANZCOG has run the program in New Zealand since 2005. In 2019 RANZCOG commenced delivering PROMPT 3, the newest version of PROMPT. This version includes two new modules, updated research, data and figures. What is PROMPT. PROMPT is an evidencebased, multiprofessional obstetric training package that trains all those who care for mothers and their babies together in the effective management of obstetric emergencies. <https://cywts.com/userfiles/dell-pe-2970-manual.xml>

The program aims to reduce preventable harm for mothers and their babies. The program focuses strongly on the communication, teamwork and situational awareness skills of team members and how improving these will benefit response times and management of obstetric emergencies. In situ delivery of training allows facilities to test existing processes and policies for efficiency and effectiveness, with results from testing informing change where required. Real time training will deliver real results. RANZCOG PROMPT Train the Trainer T3 Courses train hospital teams how to run the PROMPT program onsite at their facility. The program is delivered via presentations, discussion and hands on practical experience from participation in simulated obstetric emergencies. The T3 Course is designed to be attended by obstetricians, GP obstetricians, anaesthetists, GP anaesthetists, emergency physicians, paediatricians, midwives, registered nurses and any other specialist involved in the management of obstetric emergencies at your facility. Course registration options. There are two registration options T3 course attendance is designed for an obstetric team from a hospital. Typically this team consists of all disciplines that are involved in dealing with emergencies at your facility can participate. Team sizes. Typically facilities will submit a team based on one of the three options below Team of four This is considered the base team and consists of RANZCOG acknowledges that from time to time existing PROMPT trained facilities may need to train individual members of staff to join their in house PROMPT faculty. To support this and assist facilities maintain program integrity individual registrants are permitted to attend in the following circumstances New date TBA New date TBA New date TBA PROMPT UK released PROMPT 3, the newest version of PROMPT in 2018. The Australian and New Zealand Edition of the resource manuals are now available for purchase.

Available for purchase are the following Download an order form here and forward to the publisher once completed. Individuals who wish to purchase a copy of the manuals can do so online. RANZCOG recognises the special status of Maori as tangata whenua in Aotearoa New Zealand and is committed to meeting its obligations as Te Tiriti o Waitangi partners. By using our website you agree to our use of cookies. Over the past five years, there has been increasing evidence that PROMPT training is having significant impact on outcomes in the UK, and internationally. In 2016, PROMPT was recognised in the NHS England National Maternity Review. The PROMPT training package consists of interactive lectures, drills and workshops, providing hands on experience of practical skills and

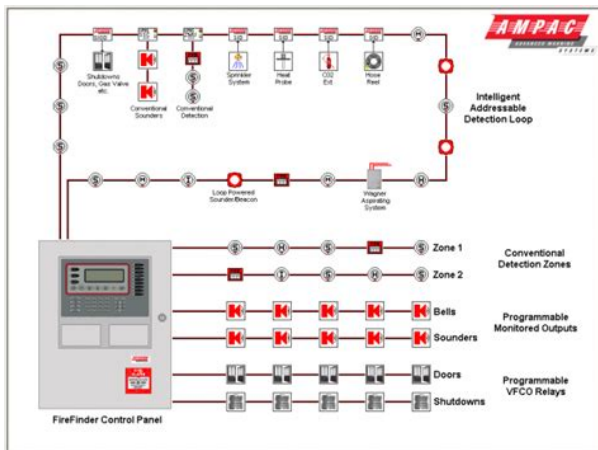

teamworking in simulated obstetric emergency situations. This third edition has been comprehensively updated in line with recent evidence and national and international guidelines to reflect the latest research and current clinical practice. There are new modules, algorithms, implementation tools, scenarios and videos. The course manual is essential reading for all those attending a local PROMPT course. It is also useful as a standalone textbook, providing evidencebased, uptodate information for any health professional involved in maternity care. show more Cord prolapse; 12. Find The procurement process begins when a need to buy something is identified and continues after the contract is awarded through effective contract management. It is often one element of a wider strategic commissioning process. Contracts must be awarded through genuine and effective competition unless there are exceptional reasons not to do so. All procurement activity should be focused on the delivery of value for money; conducted to high professional standards, in accordance with relevant guidance and to the relevant legal requirements; and overseen by appropriately trained and authorised staff. However, where a contract does not exist and there is a need to buy low value goods and services operational areas can use their ePC to purchase directly from the supplier in line with the requirements set out in the electronic purchasing cards ePC guide for public bodies. Adherence to the policies set out in this manual is mandatory for core SG staff, and for any other entities e.g. relevant SG Executive Agencies and SG sponsored bodies whose procurement projects are managed by the Scottish Procurement and Commercial Directorate SPCD on a shared

service basis. The Handbook should be read in conjunction with the Procurement Journey which provides a key source of guidance and documentation for the Scottish public sector and is updated on a continual basis with any changes in legislation and policy, facilitating best practice and consistency and other guidance issued by SPCD, including Scottish Procurement Policy Notes which provide updates on legal and procurement policy developments and Construction Policy Notes which provide guidance on policy relating to the conduct of construction projects and contracts.

Staff must not enter into a contract for goods, services and works and oversee the process leading up to and including the award of a contract and, any subsequent contract changes without the necessary written authority provided by the SGs Director, Commercial and Procurement. DPA is distinct from financial authority and other organisations to which the SPFM is directly applicable including separate accounting entities within the Scottish Administration should adopt procedures consistent with those in the core SG and set out in the Scottish Government SG Procurement Policy Manual. Budget holders should have authority to commission orders by specifying their requirements and providing budgetary authority for the expenditure. The authority to purchase DPA and ultimately place that order should be in separate hands. In addition, there should be an appropriate separation of duties within the purchasing cycle between staff who place orders, those who receive goods, services or works and those who authorise payment. Separation of functions should be designed both to provide necessary safeguards against impropriety or unethical practice and to ensure achievement of value for money. For the avoidance of doubt, HOWEVER, staff in the core SG do not need DPA to be an ePC card user. It oversees the contract and supplier management process during the life of the contract. It enables buying organisations to manage contracts. Staff who have completed training and been awarded CMA status are known as Contract Managers CMs. It will specify the value of contracts excluding VAT that the individual will be authorised to manage; CMA does not automatically transfer to their successor should they leave their current post nor does it transfer with them to another post. If CMA is to be withdrawn by the Director, Commercial and Procurement for any reason this will be confirmed in writing.

The SG Consultancy Procedures are mandatory for core SG and should be regarded as relevant good practice guidance by all organisations to which the SPFM is directly applicable. Specific prior approval levels for the SG, SG Executive Agencies and SG sponsored bodies are set out in guidance from SG on the use of consultancy procedures. Sharing services is a key theme of the Scottish Government's strategy to make more efficient use of resources in the delivery of key objectives and outcomes. The Procurement Shared Service has been developed in conjunction with a number of Central Government organisations' with the principles of collaboration and collective governance at its core. Three types of service have been developed It can also be utilised to cover gaps in capacity. Expenditure and Payments section of the SPFM. The policy regarding the use of the card is detailed in the electronic purchasing cards ePC guide for public bodies. Weve been developing, improving and selling Prompt. Text can be imported and exported to and from the application in the standard.txt format as well as saved with a native Prompt!.pmt format. Try out the lite version before you buy. The scrolling settings you make stay with the file. The video output of the scrolling text is reflected from a half silvered pelli mirror and the camera shoots through the other side of the mirror so that the talent is looking into the camera but reading the reflection of the text. This requires lots of hardware and software to achieve the same results as Prompt. Trial and error is the key to getting a natural look to this process but the further the camera is from the subject, the better. If the talent will be controlling their own scrolling then mouse control is the best and if you have long mouse cord, thats even better. There is a builtin function to allow someone else to control the speed by using the keyboard or mouse. Use both if you like. For those traditionalists, Prompt.

Try out the FREE lite version before you buy. The lite version only works with text files of under 2500 characters. The link is here. Macintosh users already have a decompression utility as do

Windows users, but if you are a windows user and experience trouble then then please download a free ZIP utility for your platform here. Its designed to work with PowerPoint and alike but Prompt.You can change the pause speed setting while Prompt.If you are interested in controlling Prompt via wireless foot control then you should check out the Airturn BT105 for Mac and PC. The AirTurn BT105 is a wireless unit for controlling Prompt.The BT105 can connect two footswitches which they sell as a package too to provide speed control for Prompt!. The price is very reasonable as well. Prompt! will allow me to compete in this ever increasing marketplace with a professional tool that is adapted for todays marketplace and needs. My last shoot involved a greenscreen technology called Chromatte by ReflecMedia. It uses leds on the lens and prohibits the use of traditional mirror based teleprompters. Ill never go back! This will save me time and money. Once we came across Prompt.The ease of use, features, and ability to run on our laptops allowed us to set up on client sites hassle free. Now with Prompt! our work days just became that much easier. We would recommend Prompt. This version is so user friendly.Its not a plugin nor special effects generator, but an independent app thats pure musthave. Theres even a FREE lite version. So what does it do It converts your laptop into a teleprompter. Now thats pretty sweet. Its a lifesaver when your oncamera talent cant remember their lines. Its also ideal for small, doityourself shoots and vlogs. Import your text into the app and control the size of fonts, display on screen mirror text, use mouse or keyboard controls, or auto scroll. Dingbat magazine.

Live departure times and reservations have been available as apps for a while, but it's still primarily a manual process. Wouldn't it be better to just have the app prompt your purchase as soon as you reach the station. Of course it would, and although the technology is available, we are not quite ready for such a change. Live departure times and reservations have been available as apps for a while, but it's still primarily a manual process. Of course it would, and although the technology is available, we are not quite ready for such a change. Such apps use geofencing to estimate your physical location. Alternatively, your location can be determined by GSM call towers, or tracking the WiFi networks you connect to. More recently a new technology called Bluetooth beacon has become popular for location based services. If you travel the same distance every business day at more or less the same time, you could let your app book your ticket automatically. If you have a more varied travel pattern, your app could prompt you with a few easytoselect alternatives based on your most frequent journeys. In time, millions of devices will run for years on small coin cell batteries. Beacons have one simple task Broadcast a single message repeatedly to any receiving device within its range. This could help railway stations and other public services to conduct remote maintenance, or to spot beacons that need new batteries or total replacement. A growing number of apps can take advantage of beacon signals, and we anticipate a lot of useful services will enter the market. Among other things, beacons are used to create more personal shopping experiences, with relevant offers and discount coupons made available to customers nearby. As a response to this, Google rolled out Eddystone, their own crossplatform Bluetoothbased beacon technology. GPS technology suffers from an additional disadvantage it does not work in an indoor environment.

Adding low cost beacons enables location based services indoor. Another advantage of Bluetooth beacons is their accuracy, making them able to locate devices with an accuracy of a few tens of centimeters. The low cost of the beacons make them ideal for large deployments and the battery lifetime is typical several years. This together makes it attractive total cost of ownership. Yet beacons themselves are not intelligent, they are just hardware transmitting a signal. There is no Internet connection and no transfer of data from nearby devices. National legislation may regulate the use of beacons, so in general, explicit optin from the end user must remain mandatory when it comes to beacon services. Users need to choose to download the app and give it explicit permission to access their location. It is called the EddystoneEID. The Bluetooth Smart chip from Nordic Semiconductor all have hardware and software in place to avoid that the end consumer being easily tracked. The beacon technology already exists today, ready for you to take advantage of. In fact,

Nordic Semiconductor has already sold millions of chips for beacons. Are you ready to take the next step Par has extensive engineering experience starting as a RF Application Engineer. Par Hakansson joined Nordic Semiconductor in 2015 and currently works as a Strategic marketing manager. He also serves as a board member for the Thread Group. Our goal is to inform you, keep you updated and help you understand the opportunities and challenges of IoT for your industry. VoiceTrack tm uses speech recognition to scroll as you speak and pause when you pause without the need for an internet connection helping to reduce anxiety associated with public speaking and with video production. The natural flow of the text reduces the time needed to get a usable take during a video shoot, particularly with amateur talent.
