Together with the SD300, SD400 and SD500 although the last is a tad larger than the other three, they represent the new generation of Powershot cameras that are characterized by a thin profile, the inclusion of the second generation DIGIC processor, and the capability of capturing video with high enough quality for inclusion into homemade DVD discs. The SD200 is ideally suited as a generalpurpose camera for a casual amateur, or a second camera for a more serious photographer or enthusiast. For families that like to share one camera, the Auto mode should be simple enough for even little children to use although the tiny small factor and small buttons might prove to be a challenge to adults with smalltolarge sized hands. If you don't need to generate prints any larger than these or if you don't need 300 dpi photo quality, then any higher resolution will not yield better results. The higher resolution comes in handy when you want to crop your images. On the SD200, you can also take photos at lower resolution 1600 x 1200, 1024 x 768 and 640 x 480. On the video side, the camera takes videos at full VGA 640 x 480, 30 frames per second fps resolution. One outstanding feature is the 320 x 240 at 60 fps mode, especially useful for fast movement. There is no time limit on any video mode; you are only limited by the size of your video card.

While shooting, the LCD displays such things such as shooting mode, metering mode, flash status, orientation landscape or portrait, resolution, quality superfine, fine, normal, ISO setting in Manual mode, white balance setting and numbers of photos you can take on the card. While reviewing photos, the LCD shows the file number, sequence within the card 2 of 32, for example, resolution, quality, date and time taken. If the Display button is pushed, it additionally displays camera mode, exposure compensation used, white balance setting, flash setting, metering mode used, and displays a histogram to check if your photo is over or underexposed. You also have the option of having the LCD display just the image no info during shooting, or to have it turned off altogether to save battery life. The only thing missing that an enthusiast might wish for is a mode in which you can control shutter speed, aperture size, or both. The SD200 employs 9 AiAF Artificial Intelligence Autofocus points to determine the best focus for the shot. Alternatively, you can set the focus "priority" to be the central framing area. Light metering is also selectable between Evaluative, CenterWeighted and Spot. It is this database that the DIGIC II processor refers to in making its decisions when you select the AUTO mode, or employ either AiAF or Evaluative metering. Form and Design This is one small camera. It's not quite as thin as the Casio Exilim S100, currently the thinnest zoom ultracompact, but it'll fit in just about any pocket you might have. The top of the camera has from left to right the small Power button a bit small for averagetolarge sized hands, but certainly minimizes the chances of accidentally depressing it and the zoom lever which concentrically surrounds the shutter release button. The very tiny Power status light is directly under the Power button. The right side of the camera has the cable port USB, TV door; the left side has nothing of note.

The rubber flap over the door is for the DC Coupler that lets you run the camera off AC kit sold separately. Smaller cameras require smaller lenses. The SD200 excels here, with relatively low noise even at ISO200, very little traces of jaggies and lots of detail. I have seen this before on other cameras; this may be the digital manifestation of lens flare or some internal reflection in the body when the light gets past the lens. In any case the problem is minor unless the bulk of your video shooting is in very bright light. Here are some sample images, taken outdoors and indoors at various focal lengths across the zoom range. A child, given minimal training in operation and care of the camera, can take good photos. If you decide to get more creative, the menu system is rather intuitive and straightforward especially if you've used digital cameras before. The joystick is easy to use and feels comfortable, with positive "click" feedback. Here are some shots of the LCD in both capture and review mode Battery Life Canon claims 400 shots on a charge with the LCD off, 140 with the LCD on. I was easily able to achieve this by enabling Power Saving turns off camera after a set amount of time and turning down the brightness of the LCD backlight. In less conservative usage you should be able to take 100 shots an average day of picture taking easily on a charge. Specifications Complete specifications from Canon can be found here Canon Powershot SD200 Specifications Conclusion The SD200 is not just an excellent ultracompact camera; it's an excellent camera that just happens to be ultracompact. There are enough features here to satisfy photographers of any category except perhaps enthusiasts or professionals; if it had full manual controls it might. Image quality is very good but not excellent, an understandable tradeoff for its minuscule size.

It's a fine choice for an individual or family with training as a generalpurpose camera, or as a takeanywhere second camera for a pro or enthusiast.
